

**Christ is the inventor of Fur Saddles.**

In today's Newsletter we would like to introduce to you selected models.  
We will also answer the questions which fur saddle and size is suitable for whom.

## Which saddle is right for me?

Technically, the model **Cloud Special+** is the newest developed and of all the possibilities most likely the best for any rider. Most riders prefer this model since it closely resembles treed saddles.

If you are switching over from an English saddle (i.e. dressage), then the **Basic Plus** or **Premium Plus** would be most suitable. If a Western saddle was used then the **Diamond Plus** is highly recommended. The **Cloud Special+** is also geared towards Western and Trail riders. Due to its build it can be used for gymnastic jumps.

The **Iberica Plus** is the ultimate all-round model. Anyone likes it and it is the most sought after model at this time.

We would like to introduce the following models:

**Fur Saddle Cloud Special+:** The "CLOUD special plus" is entirely of sheepskin on the underside. 30mm wool in the seat area and 15mm on the sides, just like our "special" saddle pads. It has a saddle flap and sweat flap which allows the use of detachable knee blocks, which are fixed by Velcro. These give additional support and allow gymnastic jumps. The cantle receives its fit by a special composite foam core which is already formed as a seat. As with all of our fur saddles, stirrups can be attached. Composite foam inserts are included as standard.

**Fur Saddle Basic Plus:** The seat is made entirely of lambskin and has a depth of approx. 30mm. Removable padding on the left and right of the spinal canal increases the seat comfort and protects the horse's back. It is especially for horses with pronounced withers that the PLUS versions of the fur saddle line should be used. Like other bareback pads, the fur saddle Basic Plus is usually ridden without stirrups. Stirrup leathers can also be attached to D-rings under the lambskin seat for better balance.

**Fur Saddle Premium Plus:** The seat is made entirely of lambskin and has a depth of pile of approx. 30mm the underside only at the back. Fleece rolls at the side provide additional stability and increase the feeling of sitting securely. The lambskin seat can be unzipped and taken off and a special gullet plate can then be put into the pocket provided. The stirrup bars fixed to the gullet plate allow you to mount the horse using stirrups. Removable padding on the left and right of the spinal canal increases the seat comfort and protects the horse's back.

**Fur Saddle Diamond Plus:** A very complex constructed Western model of the fur saddle series. Fork and Cantle are made of specially shaped foam cores. The sheepskin seat can be detached. Removable padding on the left and right of the spinal canal increases the seat comfort and protects the horse's back. Stirrup leathers can be attached to the D-rings under the lambskin seat for better balance. We offer smooth leather fenders including rawhide leather covered stirrups as an additional option to the Bareback pad Diamond Plus.

**Fur Saddle Iberica Plus:** The Spanish-style fur saddle. The seat is made entirely of lambskin and has a depth of pile of approx. 30mm the underside only at the back. The higher cantle and pommel provide additional stability. Removable padding on the left and right increases the seat comfort and protects the horse's back. It is especially for horses with pronounced withers that the PLUS versions of the bareback riding pads line should be used. The article is machine washable with a special lambskin detergent.

## Which is the correct seat size?

The size of the fur saddle should be selected primarily by the riders size. Ladies up to clothing size 8/10 (European 40/42) will best fit in PO size, but can also take the WB size, if they have large-sized horses, which would make the PO size look tiny on their horses. But this is a purely aesthetic matter. Ladies 10+ size will find WB size most comfortable. Size WB will also fit smaller horses and ponies. Men should choose size WB size if their sizes are 40/42 or above.

The pressure is mainly located where you sit and is caused by the bones of your pelvis. Just like riding without a saddle, except that the **CHRIST** fur saddles protect your horses back via lambskin cushion underneath the saddle, the composite upholstery (padding inside) and the seat's lambskin and together distribute the pressure evenly alongside the horses back.

Since **CHRIST** fur saddles do not have a fixed saddle tree, they are ideally suited for every horses' back. Yes, every single one of them. This is particularly helpful if you're fitting a sway backed horse, or extremely short backed horses, or are dealing with symmetry issues. **CHRIST** fur saddles are a great alternative and often the only way to ride these horses again. Fur saddles don't have to be fitted, because only soft and very flexible materials are used and nothing hinders or restricts the movements of the horse, therefore, **CHRIST** fur saddles suit all horses.
